EASTMAN KODAK
METHYLENE BLUE ANALYSIS

Customer Name

Address:

McCOR
802 Charent Dr
Bethlehem Pa 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute

Concentrations of less than ($<$) $1.4 \mu\text{g}$ (micrograms) indicate archival quality and greater than ($>$) $1.4 \mu\text{g}$ indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week timeframe.

Actual test readings are provided below, as well as "pass/fail" check marks

[illegible]

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI Standard IT9.1-AS: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 μg for residual thiosulfate.

For additional information on archival storage conditions, you may wish to ask your Kodak representative for a copy of Kodak Pamphlet D-31, "Storage & Preservation of Microfilms."

Comments.

A small, tilted image of a document page, possibly a page from a book or a document, showing a grid of numbers. The numbers are arranged in a 3x3 grid, with the top row containing 1, 2, 3, the middle row containing 4, 5, 6, and the bottom row containing 7, 8, 9. The image is rotated approximately 45 degrees clockwise.

1957

A close-up photograph of a white ceramic tile featuring a grid of black numbers. The numbers are arranged in four rows and three columns, reading from top-left to bottom-right: 23, 22, 20; 28, 27, 26; 25, 24, 23; and 22, 21, 20.

A 3x3 grid of numbers from 1 to 9, rotated 45 degrees clockwise. The numbers are arranged in a pattern where the top row contains 1, 2, 3; the middle row contains 4, 5, 6; and the bottom row contains 7, 8, 9.

A close-up photograph of a document, likely a form or a ledger, showing a grid of numbers. The numbers are arranged in a pattern that suggests a sequence or a code. The visible numbers include 23, 22, 20, 19, 18, 17, 16, 15, 14, 13, 12, 11, 10, 9, 8, 7, 6, 5, 4, 3, 2, 1, and 0. The numbers are printed in a bold, sans-serif font and are arranged in a way that they appear to be part of a larger, repeating pattern.

THE CITY OF NEW YORK
OFFICE OF THE CITY CLERK
MUNICIPAL BUILDING
NEW YORK, N. Y. 10007

EASTMAN KODAK
METHYLENE BLUE ANALYSIS

Customer Name:

Address:

MICOR
800 Charent Dr.
Bensalem Pa 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than ($<$) $1.4 \mu\text{g}$ (micrograms) indicate archival quality, and greater than ($>$) $1.4 \mu\text{g}$ indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

TEST IDENT.	ACTUAL CONCENTRATION	MEETS ANSI STANDARD ($<$) $1.4 \mu\text{g}$	DOES NOT MEET ANSI STANDARD ($>$) $1.4 \mu\text{g}$
6-1-90	< 20	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI Standard IT9.1-AS: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at $1.4 \mu\text{g}$ for residual thiosulfate.

For additional information on archival storage conditions, you may wish to ask your Kodak representative for a copy of Kodak Pamphlet D-31, "Storage & Preservation of Microfilms".
